

PD4-FE

Palladium iron solution for bath plating 4 g/l ready-to-use bright white color

PD4-FE is a ready-to-use palladium iron alloy electrolyte. By using iron as an alternative to the common palladium alloys: Nickel and cobalt, the deposit remains 100% hypoallergenic. The solution is ammonia free making it easy to operate over time and aside its decorative use, it also combines a protective layer against corrosion and copper migration as it is an air-tight layer free from internal tension within the micro-structure at every thickness.

Metal concentration	4 g/l (Pd)
Volume	1 liter
Purity (%)	90
Density (g/cm ³)	12
Hardness (HV 0,01)	450-500
Thickness (um)	0.2-5
Appearance	Shiny
Color	White

Packaging
